***Allowable Subject Matter***

Claims 2, 3, 5 and 7-12 are allowed.

The following is an examiner's statement of reasons for allowance: The Prior Art of record fails to teach or render obvious a method of manufacturing a semiconductor device in patterning of a conductive film and a thin dielectric film, comprising the steps of: a first etching step of carrying out anisotropic etching until most of the conductive film in a flat portion of the dielectric film disappears, the first etching step using a mixed gas including O<sub>2</sub>, and a second etching step of increasing a selective ratio to the dielectric film, by increasing the flow ratio of O<sub>2</sub> to etch the conductive film in a first desired portion of the dielectric film in a state in which the conductive film is caused to remain in a second desired portion of the dielectric film such that a thickness of the dielectric film provided under a grain boundary between the conductive film and the dielectric film provides a pattern to prevent oxidation species associated with the mixed gas from reaching an interface with a substrate after the first etching step; wherein the second etching step uses hydrogen bromide (HBr)/Cl<sub>2</sub>/O<sub>2</sub> plasma, wherein the second etching step is executed at an in-chamber pressure of 2 mTorr or less, and further wherein the conductive film is a silicon type conductive film.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
